EDUCATION

Seoul National University (SNU)

Ph.D. in Physics · Advisor: Prof. Hyunyoung Choi · Seoul, Korea

Mar 2019 – Feb 2027 (expected)

Pohang University of Science and Technology (POSTECH)

B.S. in Physics · Pohang, Korea

Mar 2014 – Feb 2019

RESEARCH EXPERIENCE

Research Assistant, Korea Institute of Science and Technology (KIST)

Feb 2026 – Present

Advisor: Dr. Junghyun Lee

- Estimated defect densities from DEER data as part of a collaborative project with the Awschalom group (University of Chicago).
- Developing Python-based control software for a spin measurement setup, covering FPGA-based timing and AWG pulse generation.

Graduate Research Assistant, Seoul National University (SNU)

Aug 2019 – Present

Advisor: Prof. Hyunyoung Choi

- Built the group's first NV center measurement system, including the confocal microscope, microwave delivery, pulse sequencing, and Python-based instrument control and data acquisition.
- Polarized the dark P1 electron spin bath by repetitive Hartmann-Hahn transfer from NV centers, and characterized the coherence and disorder of the resulting collective spin state.
- Developed a method to identify NV crystallographic axes from spatially varying microwave fields, enabling vector magnetometry without a calibrated bias field.
- Built a femtosecond laser-writing system with SLM-based aberration correction and real-time photoluminescence monitoring for site-controlled creation of color centers in diamond, SiC, and hBN.

“Precise calibration of magnetic field vector in a diamond nitrogen-vacancy center ensemble”
4. **Conference on Lasers and Electro-Optics (CLEO)**, San Jose, USA, May 2022. (*poster*)
“Deterministic creation of single nitrogen-vacancy center in diamond using femtosecond laser writing”
5. **Optics and Photonics Congress (OPC)**, Jeju, Korea, Jul 2021. (*oral*)
“Aberration correction of femtosecond lasers for deterministic quantum emitters in nitrogen-vacancy diamonds”

TECHNICAL SKILLS

Coherent spin control — Pulse-sequence design on AWG, TTL pulse generator, and FPGA, including IQ-modulated microwave pulse shaping and synchronization of laser and photon-counting gates.

Optical measurement and control — Confocal scanning microscopy, gated and time-correlated photon counting, photoluminescence spectroscopy, AOM double-pass laser pulse control, femtosecond laser writing with SLM-based aberration correction.

Instrument control and data acquisition — Measurement automation in Python and LabVIEW.

Simulation and modeling — Spin dynamics and Monte Carlo simulation in Python (QuTiP), electromagnetic field modeling (COMSOL).

Fabrication — Photolithography, RIE, thermal evaporation, 2D material exfoliation and transfer.

Design — PCBs, photomasks, and machined mechanical parts (Altium, KLayout, AutoCAD, Fusion).

TEACHING EXPERIENCE

Teaching Assistant, Seoul National University

Electrodynamics I (Spring 2021) · Computational Physics (Fall 2020) · Electromagnetic Waves and Optics (Spring 2020) · Physics Lab. 2 (Summer 2019, Fall 2019) · Physics Lab. 1 (Spring 2019)

HONORS AND AWARDS

- | | |
|--|---------------------|
| – BK Excellent Teaching Assistant Award | Jul 2020 |
| – BK Frontier Fellowship | Mar 2019 – Aug 2019 |
| – National Scholarship for Science and Engineering | Mar 2014 – Feb 2018 |
